

Dr. Mary De Vera

Dr. Mary De Vera holds a Canada Research Chair in Medication Adherence, Utilization, and Outcomes. She is an Assistant Professor at UBC's Faculty of Pharmaceutical Sciences and Research Scientist at Arthritis Research Canada.

The theme of her research is "Medication Matters" and her goal is to improve outcomes of medication taking in different patient populations. Her current research interests are: 1) understanding medication adherence at the population level and developing and testing targeted interventions; and 2) examining the use and impacts of arthritis medications among pregnant women with arthritis.
